

# for **SERIOUS MINERS** who require **heavy duty** solutions...

## **DEROCKER**

**The RMS DEROCKER System is THE SOLUTION for effectively mining or washing coarse bouldered gravels**

Designed for the liberation and retention of gold and other heavy target minerals while removing boulders up to 4 feet in diameter and delivering a 2 inch minus product

- Ideal for alluvial projects or aggregate operations with large rocks
- 3 Models - Capacities of 80 to 250 cubic yards per hour
- Articulating 400 Brinell Hardened Steel Deck
- Sealed CAT style pins and bushings
- Variable hydraulic drive with proximity sensor control
- No blinding
- Can be run with a sluice or with a screen and jigs or centrifugal concentrator

The DEROCKER has a sub-frame and skid to easily re-locate on a mining property. The sub-frame sets the DEROCKER at the optimum operating angle of 11 degrees.

The RMS DEROCKER system comes with optional high pressure water manifold with high impact spray nozzle configuration and boost pump to deliver 80 PSI, ideal for situations with some clay or sticky materials.
